Learning objectives

After attending this program, the learner will:

- Gain insight into the wide range of liver diseases leading to End-Stage of Liver Disease (ESLD).
- Outline the surgical and nursing management of patients undergoing liver surgery
- Utilise knowledge gained to identify and respond to complications of ESLD with evidence based nursing care, including patient care considerations related to psychosocial issues, carer burden and palliative care management.
- Gain an understanding of the pathophysiology and the specific disease management principles of hepatological disorders, such as: Hepatitis B & C, Drug-induced liver failure, Hepatocellular Carcinoma, and NAFLD/NASH

What participants say:

- The programme was very informative and interesting, it was hepful to update the knowledge to implement in clinical practice
- It will make me consider important features and improve my management of patients with liver failure and liver disease
- It provided greater awareness of the contribution drugs and non-prescribed complementary medications have on liver disease

Who should attend?

All nurses and health care professionals working in a healthcare service
