

Introduction to Pain Management

This **Clinical** program provides nurses with knowledge and skills to care with patients with acute and chronic pain, based on the biopsychosocial model of pain management. Sessions include workshops and case studies. Delivered by subject matter experts. Participants are encouraged to attend **both** Day 1 & 2.

Learning objectives

After attending this program, the learner will:

[VIEW PROGRAM AVAILABILITY](#)

- Gain an understanding of the mechanism and physiology of pain perception and the process of nociception
- Discuss the biopsychosocial model of pain which attributes to disease outcomes
- Utilise effective pain assessment in the clinical setting, using evidence based tools for patients who are cognitively impaired or who are Culturally And Linguistically Diverse
- Explain the rationale behind various treatment and modalities

What participants say:

“100% the session will change how I document regarding pain, how I assess pain as well as how I view chronic pain. The palliative care by Jo Pollard was extremely interesting and has empowered me to have open conversations with medical team members regarding my patients.”

“I have already recommended this study day to 3 people on the ward. I absolutely loved every minute of it :) Thank you!!”

Who should attend?

All nurses and health care professionals working in a health care service.

Facilitator

Jill Kemp | CNC Acute Pain Service | Corporate Nursing | SCGH
