Learning objectives

After attending this program, the learner will:

- Advocate for improved hand hygiene compliance amongst all healthcare workers, patients and visitors to reduce the risk of healthcare associated infections
- Follow infection control principles when collecting specimens
- Improved assessment and management of PIVC (peripheral intravascular catheter) to reduce the risk of healthcare associated infections
- Able to assist in the implementation of infection prevention and management measures in an outbreak

VIEW PROGRAM AVAILABILITY

What participants say:

"All of the sessions were helpful to increase my knowledge, both helping to reinforce my foundation of knowledge as well as expanding on those foundations"

"Understanding the evidence behind why policies and procedures are in place and making me more vigilant with my personal practice (hand hygiene) as well giving me a basic understanding of how to perform sampling (wounds)"

"Today's session has made it much easier for me to understand the different types of HAI and the rationale for standard and transmission-based precautions
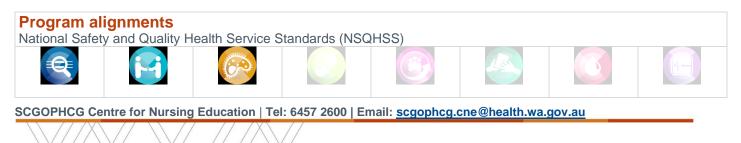

Who should attend?

All health care professionals working in a healthcare service with an interest in infection prevention and control.
