Learning objectives

After attending this program, the learner will:

- Recognise how to perform neurological observations and assessments accurately
- In the clinical setting I will be able to escalate my concerns based on my knowledge of neurological assessment obtained during the study day
- Identify signs and symptoms and develop an understanding of the pathophysiology of the deteriorating neurological patient
- Gain insight into common neurological disorders such as stroke, epilepsy, multiple sclerosis and Parkinson’s disease.

What participants say:

“I chose the neuro study day as neuro patients are far from my comfort zone in terms of patient care, I am surprised after one study day I feel much more confident in this regard. Thank you to all the speakers!”

“As I currently work on G51 Neurology, I have been able to take alot that I learnt from this development day and really put into practice on the ward and have a better understanding of what to look out for in stroke and seizure patients.”

Who should attend?

All nurses and healthcare professionals working in a healthcare service
