Learning objectives

After attending this program, the learner will:

VIEW PROGRAM AVAILABILITY

- Describe the identification, assessment and care of cadaveric organ donors, and the roles of Donate Life and the SCGH transplant team in the organ donation/allocation process.
- Describe the practical and ethical aspects of caring for patients receiving or donating organs, including the psychosocial impact of the organ donation process
- Discuss the organ transplant experience from the perspectives of the donor family, living organ donor and organ recipient
- Effectively care for an organ transplant recipient in any setting, including the timely administration of anti-rejection medications and the prevention of infection

What participants say:

“My professional skills will improve by providing holistic care to the patient considering not only the physical attributes of having a transplant but also the psychosocial side.”

“Clinically, this will help me to ask better questions when engaging with these patients, to ensure investigations are thorough and create a more informed clinical picture.”

“It has improved my understanding of patients background in organ failure and the need for transplants.”

Who should attend?

All nurses and health care professionals working in a healthcare service
