Learning objectives

After attending this program, the learner will:

VIEW PROGRAM AVAILABILITY

- Identify the causes and stages of kidney failure and the common complications experienced by patients
- Describe the different renal replacement treatment modalities used to treat kidney failure
- Recognise, assess and protect the different types of dialysis access that are required for ongoing dialysis treatments
- Discuss the impact of kidney failure on the patient and (and their significant others) on their physical/ psychological/ social/ quality-of-life

What participants say:

"It's so good. I think I am going to try to get a job there"

"All of the topics of today's study day has improved my knowledge and understanding of renal disease, treatments and nursing care approach to each individual with renal problems"

"I will apply what I learned today to my patients as I now have a better understanding on how to look after patients with renal disease"

Who should attend?

All nurses and health care professionals working in a healthcare service
